

## Job Role: Pen Testing Manager

Location: London

Secgate is looking for a penetration testing manager who is passionate about building the best user experience and capabilities for clients.

As a penetration tester, you would be expected to conduct formal tests on web-based applications, networks, and other types of computer systems on a regular basis. You will also be expected to work on physical security assessments of servers, computer systems, and networks. Along with these tests and assessments, you'll be conducting regular security audits from both a logical/theoretical standpoint and a technical/hands-on standpoint.

### Key responsibilities include

- Guides the team in pen test engagements as well as Red Team / Blue Team activities
- Sets and adjusts the focus and engagement strategy for the team
- Motivates the team, and inspire a fun and highly productive work environment
- Performs pen tests to locate security issues
- Analyses vulnerabilities to determine exploitability and value
- Actively communicates and coordinates within the team
- Documents, explains and demonstrates findings within the team as well as to other teams
- Proactively engages with stakeholders to eliminate obstacles to the team objectives
- Writes, reviews and approves assessment reports

### Requirements:

- Bachelor degree or higher, technical discipline preferred
- 3 to 5 years of working experience in IT Security, preferably with exposure to application security testing (source code review and application penetration tests)
- Working knowledge of Security principles, techniques and technologies
- Strong understanding of network protocols, design and operations
- Strong analytical skills and efficient problem solving
- Willingness to travel
- Good English communication skills (written and oral)

### Desired but not essential:

- CISSP, CISA, CEH, OSCP or other information security certifications
- Application development background and security knowledge – example of languages include , C++, Java.
- Vulnerability and threat management experience
- Experience with various security tools and products (Fortify, AppScan, etc...)
- Good understanding of the components of a secure DLC/SDLC
- Vulnerability analysis and application reversing skills
- Understanding of cryptography principles

---

### Salary and Financial Package

£40000 to £70000 depending on experience + Performance Related Bonus
